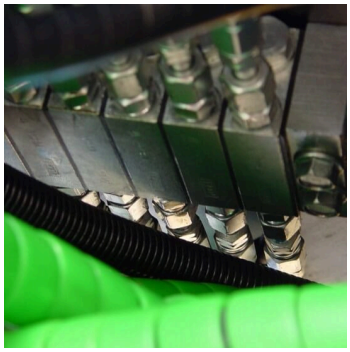
Central lubrication

配件



Factory fitted for increased reliability

Central lubrication of the tiltrotator is growing a lot and might soon be a standard option.

The disadvantage of retrofitting central lubricatoni on the tiltrotator is that it can be difficult to mount the components once the tiltrotator has passed final assembly. If a hose is pinched then the central lubrication does not work perfectly. Steelwrist therefore offers factory-fitted central lubrication in a way to safeguard the quality of the installation.
